Finding one unit

Bridge course, unit 6

NAME

Patans.

DATE

Some of these are multiplications with a box in them and some are divisions. All of them are asking the same thing: what is one unit worth. Find that first, every time.

1. $\frac{1}{5} + \frac{2}{5} = \frac{\square}{5}$. What goes in the box?

2. $\frac{2}{6} + \frac{3}{6} = \frac{\square}{6}$. What goes in the box?

3. $\frac{3}{8} + \frac{3}{8} = \frac{\square}{8}$. What goes in the box?

4. $\frac{3}{5} + \frac{1}{5} = \frac{\square}{5}$. What goes in the box?

5. $\frac{4}{5} - \frac{3}{5} = \frac{\square}{5}$. What goes in the box?

6. $\frac{4}{6} - \frac{1}{6} = \frac{\square}{6}$. What goes in the box?

7. $\frac{5}{6} - \frac{3}{6} = \frac{\square}{6}$. What goes in the box?

8. $\frac{2}{5} + \frac{1}{5} = \frac{\square}{5}$. What goes in the box?

9. $\frac{1}{5} + \frac{3}{5} = \frac{\square}{5}$. What goes in the box?

10. How many 5s are there in 30?

11. A bar of 15 is cut into 3 equal parts. How much is one part worth?

12. $4 \times \square = 40$. What goes in the box?

13. Zawadi drinks $\frac{3}{6}$ of a bottle in the morning and $\frac{2}{6}$ in the afternoon. How many 6ths is that altogether?

14. How many 4s are there in 12?

15. How many 3s are there in 12?

16. A bar of 16 is cut into 4 equal parts. How much is one part worth?
